The focus of the Study

What would you like to know in your research? Perhaps it is about a specific group of people or specific experiences.
Try to select a focus where the whole Expanded Mental Model can be covered.

The current challenge is broadly formulated, leaving many possible directions for our research. For now, we are setting our focus on three key points. First, we want to understand what the current heating and energy solutions on Bornholm are, how well they have performed, and what experiences have been gathered during their implementation. Second, we want to focus on how the Baltic Energy Island project is developing, what the current plans are, and what impact its realisation could have on the island's energy infrastructure and community. Finally, we are focusing on the community itself: what previous experiences residents have had with energy or heating-related projects on the island, how these went, and whether any problems arose during implementation. This also includes the general level of acceptance within the Bornholm community, whether there are groups actively opposing or supporting renewable energy development. By combining these three focus points, we believe we can build a detailed overview and a solid basis for our further research.

Methods

Which methods have you selected and how will you use them?

We will mostly rely on interviews for which we have prepared questions. We have access to a wide variety of stakeholders, such as the Municipality, BEOF, and the Baltic Energy Island Project, but also local fishing companies, the local business center, and previous community-organized renewable energy projects. Additionally, we will conduct semi-structured interviews with local citizens from Bornholm. To do that, we will try to talk to people around the town square and supermarkets. Finally, we will enrich all our gathered data with publicly available information from the internet.

Participants

Who will you conduct research on?

Our informants for tomorrow's research cover the full spectrum of Bornholm's green transition, from key decision makers to local end users. To understand the technical and regulatory landscape, we will interview **Frederik P. Larsen** (Consultant, Bornholm Municipality) regarding land use planning, alongside **Alexander Støvelbæk** and **Torben** (Project & Innovation Managers, BEOF), who will provide the operational perspective on grid electrification. For the broader economic and industrial impacts, we are speaking with **Chista Lodahl** (Head of Business Development, Business Center Bornholm), **Mads Boss** (Portfolio Director, Ocean Prawns), and **Mads Bay Møller** (Innovation Manager, Baltic Energy Island). Finally, to ensure we capture the community's voice, we will interview **Helle Munk Ravnborg** (Chair, Bornholm Havvind) and conduct intercept interviews with the **Citizens of Nexø**. What sets the residents apart is that they are the actual end users who will live with the daily financial and visual impacts of these infrastructure changes.

Time and Place

When and where? Will you use all your time in one spot on one method?

Tomorrow, August 11, we will divide our six team members into three pairs to conduct parallel research across four different locations between 12:40 and 16:00. Team members 1 and 2 (Prithvi and Nikolas) will rotate through formal, scheduled interviews, starting at Location 1 with Bornholm Municipality from 12:40 to 13:40, moving to Location 2 for the Baltic Energy Island Foundation from 13:50 to 14:50, and finishing at Location 3 with Business Center Bornholm from 15:00 to 16:00. Meanwhile, team members 3 and 4 (Carrie and Elsa) will also travel between formal interviews, beginning at Location 3 with Ocean Prawns from 12:40 to 13:40, heading to Location 1 to speak with BEOF Energy Transition from 13:50 to 14:50, and ending at Location 2 for BEOF Innovation from 15:00 to 16:00. Finally, team members 5 and 6 (Kani and Melek) will take a mixed method approach, they will conduct a formal interview at Location 2 with Bornholm Havvind from 12:40 to 13:40, and then spend the remainder of the afternoon, from 13:50 to 16:00, stationed at Location 4 (the Nexø Town Square and Kvickly parking lot) conducting on location intercept interviews with everyday citizens.

As an example: We interview in pairs. We have a clear role distribution in the pairs, where one is 'lead' and the other person is support. The team is distributed as follows: Jacob: Interviewed by Aisha (lead) and Paula (support). Interviews at the bus stop: Oscar (lead) and Ejnar (support).

As an example: The lead interviewer record the interviews on video with a smartphone. The support interviewer takes notes on a notepad along the way.
Notes will include: observations, themes, particularly interesting things, as well as questions that arise, which the support can then ask at the end of the interview.

Setup

Who is interviewing whom? Is there one interviewer? Or two? Do you take notes? Who does that?

We will conduct the stakeholder interviews in pairs. Each pair has a clear role distribution: one member will act as the lead interviewer, while the other will support by asking follow-up questions and taking notes.

The interview assignments are as follows:

Prithvi, Nikolas: Frederik P. Larsen (Consultant in the Development Team Bornhorm Municipality, BRK Udvikling)；Mads Bay Møller (Project Manager, BEOF)；Christa Lodahl (Head of Business Development, Business Center Bornholm, BCB) .

Jiayue, Else: Mads Boss (Portfolio Director, Ocean Prawns)；Alexander Støvelbæk (Project Manager of Energy Transition, BEOF)；Torben (Project Manager of Innovation, BEOF) .

Kani, Melek: Helle Munk Ravnborg (Chair of Local Offshore Initiative on Bornholm)；Citizens from Nexø；Citizens from the Town Square or Kvikly parking lot.

Before each interview, we will briefly introduce ourselves, explain the purpose of our research, and ask for the participant's consent before starting.

Documentation

How will you document your research? Video, recording, notes or something else?

Before each interview, we will ask the participant for permission to make an audio recording. If permission is given, we will record the interview using a smartphone. At the same time, both interviewers will take notes and complement each other's observations to ensure that no important information is missed. The notes will include key findings, observations, interesting comments, and follow-up questions. After each interview, we will compare our notes, summarize the main findings, and upload all recordings and notes to our shared Microsoft Teams folder so that every team member has access to the collected data.
